May 14, 2019

Dear City of Cleveland Citizens,

The City of Cleveland Stormwater Division is studying the Hiwassee River and Conasauga River watersheds to identify restoration and water quality improvement opportunities. To accomplish this, a stream corridor assessment will be done in your area during May and June. The Hiwassee River and Conasauga River watersheds were selected because they are high priorities for water quality and wildlife habitat improvement.

Field teams will be walking the streams within these watersheds to observe and record stream and shoreline conditions. This information will serve as a basis for restoration planning. Each member of the team will be appropriately identified and will be respectful of all property. We are contacting owners of any properties that appear to abut the study area. We kindly ask that you allow a team to visit the streams along your property.

If you have concerns or questions about this study, please contact Christopher Broom or Ryan Stephens of the Cleveland Stormwater Division (423-479-1913). If we do not hear from you, we will assume that you are willing to participate. Thank you in advance for your assistance.

If additional information is needed, I may be contacted at (423) 479-1913.

Sincerely,

Christopher Broom
Stormwater Coordinator
